Detailed Action

Claim Objections

1. Claim 5 recites the limitations density of between 20 to 130 g/ft². Applicant is claiming a weight per unit area rather than density. Appropriate correction is required. Claim 4 depends on itself. Examiner assumes applicant meant for claim 4 to depend on claim 1. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 2,6 and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The term "relative" and approximate in claims 2,6 and 7 are relative terms which render the claim indefinite. Said terms are not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1764

5. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by US 6,008,149 to Copperwheat.

Copperwheat discloses a multi-layered molded nonwoven fibrous composite article. The composite is made of the same non-woven thermoformable polymeric chemical substance. Suitable polymeric material includes polyester (Col 2, lines 3-16). The composite can be used to manufacture auto headliners, trunk liners and passenger compartment components (Col 2, lines 3-16). One embodiment proposes a moldable composite structure wherein a sheet of polyester variable compression fabric is sandwiched between two sheets of formable polyester in the form of a needlepunch felt, thereby forming a composite article (Col 4, lines 9-15). The formable fabric has a basis weight of 4 to 18oz/yd² corresponding to 13.82 g/ft² to 62.21 g/ft² (Col 4, lines 1-7). Examiner notes that the variable compression fabric has insulating properties at least to some degree. Examiner also notes that absent any disclosure of color altering fillers or the like, the layers of the moldable composite structure are assumed to have the same color.
